PROFILE

I'm Vinod Karantothu! Passionate Software Engineering student from BTH (Sweden). I got interested in the field of Software Engineering because of the impact software has on our lives and the cool problems software engineers get to work on!

So, I like to be challenged, build projects and solve problems. I'm also interested in learning new languages and discovering new things. So, if you are looking for me, I'll be hacking something around, learning cool stuff, traveling/backpacking or just enjoying music 🎵😊
